

Credit Limit Reallocation Detailed Step-by-Step Process

- 1. Log in to your financial institution's online banking portal.**
 - Enter your username and password.
 - If prompted for Two-Factor Authentication (2FA), enter the verification code.
- 2. Navigate to the "Account Services" or "Credit Card Options" section.**
 - Look for a tab or link labeled something like "Manage Cards" or "Reallocate Credit Limit".
- 3. Select the "Reallocate/Transfer Credit Limit" option.**
 - This may appear as "Transfer Available Credit", "Move Credit", or "Change Credit Limits Between Cards".
- 4. Check for eligibility.**
 - The system will check if you have at least two eligible credit cards under your account.
 - If not eligible, you will see a message stating:
"You must have at least two eligible cards to use this feature."
 - In that case, you can choose to contact support or exit.
- 5. Choose the credit card you want to transfer credit FROM.**
 - A dropdown or selection box will show your available cards.
 - Select the source card that currently holds excess credit limit.
- 6. Choose the credit card you want to transfer credit TO.**
 - Select the destination card to which you want to reallocate the credit.
- 7. Enter the amount to transfer.**
 - This is usually in whole numbers or increments of \$100.

- You must leave a minimum required limit (e.g., \$1,000) on the source card.

8. System checks the minimum limit requirement.

- If the source card would fall below the required minimum after transfer, an error will show:
“Source card must retain a minimum limit of \$1,000.”
- You must reduce the amount or select a different card and retry.

9. System checks available credit amount.

- If the transfer amount exceeds what is available, an error will show:
“Insufficient available credit to complete request.”
- You will need to enter a lower amount.

10. Review the reallocation disclosure.

- A message will appear explaining that reallocating credit does not increase your total approved credit.
- You must accept the disclosure to continue.

11. Accept or decline the disclosure.

- If you click “Accept”, proceed to the confirmation screen.
- If you click “Decline”, the process ends and no change is made.

12. Review the confirmation screen.

- The system will display both cards, the old and new limits, and the amount being moved.
- Confirm the details are correct.

13. Confirm or cancel the transfer.

- If you click “Confirm”, the system will attempt to complete the transfer.
- If you click “Cancel”, the process will end without making any changes.

14. Wait for the system response.

- If successful, a confirmation message will appear:
“Credit transfer complete.”
- Your account dashboard will update immediately or within 24 hours.

15. If the transfer fails, a system error will be shown.

- Example: “We’re sorry, your request could not be processed at this time.”
- You can choose to retry or exit.

16. Choose what to do after a system error.

- If you click “Retry”, you’ll be taken back to step 5 to re-enter your selections.
- If you click “Exit”, the process ends.
- You may also choose to call customer support.

17. If self-service fails or you prefer human help, contact support.

- Call the customer support line.
- Authenticate your identity.
- Ask a representative to manually submit the credit limit reallocation on your behalf.

18. After a successful transfer, check your updated credit limits.

- Return to the account dashboard or credit card summary page.
- Verify that the new limits are reflected.

19. Optionally download or print the confirmation message.

- Some institutions provide a PDF or email confirmation for record-keeping.

20. Log out securely from your banking portal.

- Especially important if using a shared or public device.
